

AUSAGRO SEED

ENGLISH

AUSAGRO SEEDS
Specialist in Vegetable Seed

2025 - 2026

Company Profile

AUSAGRO Seeds is a family seed business, and it is established by a group of people who have many years' experience on the vegetable seed.

Hawkesbury area has rich alluvial soil and it has mild climate including the warm summer and cool winter seasons. Known as the "food basket" for Sydney, the Hawkesbury area grows a vast range of produce including stone fruits, oranges, apples, pecan nuts, berries and various vegetables such as sweet corn, cabbage, broccoli and so on.

Located in Hawkesbury region, our company is focusing on the product development on new vegetable varieties.

Our successful product development relies on our close relationship with some successful vegetable breeding partners worldwide.

Facing the challenges of meeting diverse market requirement for fresh and processed vegetables, AUSAGRO Seeds is successfully launching and marketing some vegetable varieties. These vegetable varieties are gaining popularity due to their varietal performance in terms of quality, yield, marketability, diseases packages and adaptation.

Our sister company, Tak Sang Agricultural & Seeds Ltd. is a well known seed company established in Hong Kong for 48 years.

Tak Sang Agricultural & Seeds Ltd carries a legacy that began more than a century ago, when CK Wong's great-grandfather travelled through rural China with a wooden cart filled with vegetable seeds. His entrepreneurial spirit laid the foundation for one of the earliest seed businesses in the region. By the 1950s, the family

Company Profile

established a formal seed company in Hong Kong, where CK Wong began his lifelong journey in the seed industry. During those early years, he took responsibility for marketing, customer communication, seed storage, and quality control. His great-grandfather's strong business acumen also forged early partnerships with leading agrochemical and seed companies, setting the stage for future growth.

In 1979, driven by vision and determination, CK Wong founded Tak Sang Trading Company in Hong Kong, later restructured as Tak Sang Agricultural & Seeds Pty Ltd. Over the past 48 years, Tak Sang has grown into a respected and influential company in the seed industry. In its early development, Tak Sang established strong relationships with seed companies across the USA, Taiwan, Thailand, and many other countries. The company became one of the pioneers in introducing hybrid watermelon seed into China more than two decades ago. Over the years, Tak Sang has launched a wide range of high-quality vegetable seeds—including onion, celery, asparagus, pea, broccoli, cauliflower, and cabbage—earning the trust of growers and consistently delivering varieties that perform well across diverse regions.

Today, Tak Sang is widely recognized for its extensive trial farms across China, which allow the company to evaluate new varieties under real growing conditions and ensure that only the best seeds reach the market.

Ausagro Seed Pty Ltd in Australia, strengthens this capability even further. With Australia's mild and stable climate, Ausagro is able to conduct high-quality trials and produce excellent seed, giving the partnership a unique advantage in both research and production.

Together, the two companies form a powerful network that supports growers with reliable, high-performing varieties.

CABBAGE

BORRIS F1

The plant spans 42 - 45 cm. There are relatively less outer leaves. The cabbage head is near to globe shape. The leaves are crispy. It has good eating quality with good taste. The maturity is around 55 days for Spring cultivation. The average cabbage head is about 1.5 KG.

CABBAGE

WONDER BALL F1

Wonder F1 cabbage has maturity of 65 days from transplanting. The cabbage head is about 21 cm high and 20 cm wide. The cabbage is round. The average cabbage weight is 1.5 Kg. It has some heat tolerance. It has some tolerance to black rot.

CAULIFLOWER

WHITESNOW 60 F1

Whitesnow 60 F1 cauliflower features pure white curd with maturity of 65 days after transplanting.

CAULIFLOWER

WHITESNOW 50 F1

Whitesnow 50 F1 cauliflower features pure white curd with maturity of 55 days after transplanting. EARLY maturity. This cultivar has heat tolerance.

CARROT

PRECIOUS F1

Precious F1 is a hybrid Kuroda carrot. Vigorous growth. It features carrots of dark orange colour and small core. The average carrot length is about 20 - 22 cm long. It has good root shape and size uniformity. It does not have bolting tolerance so it is not suitable for Spring cultivation. The suitable season of growing this cultivar is Autumn. When exposed to sunlight, this cultivar tends to have green shoulder. It is recommended that some measure is taken such as covering the shoulder with soil during the growth to avoid the green shoulders.

CARROT

KURODA

Kuroda carrot has maturity of approximately 100 days. It features relatively deep orange colour carrots, tender texture and sweetness. The carrot is 20 cm long, slightly tapered shaped with blunt to slightly pointed end. The average carrot weight is about 300 - 330 gram.

CELERY

TALL UTAH

Tall Utah celery is a classic celery valued for its crisp texture, reliable performance and strong, upright plant habit. It produces long, smooth, medium green stalks. Maturity is about 120 - 130 days. Tall Utah celery shows good tolerance to heat and bolting, performs well in a range of climates, and thrives in rich, consistently moist soil. The plants form well-blanching, straight stems with minimal stringiness when grown under good conditions.

CELERY

DELIGHT

Delight celery has relatively large plant size. The plant looks cylindrical and robust with compactness. The leaves are fresh green and relatively big. The stems are light green, wide and thick. The petioles have relatively less fibre and they are crispy. It thrives in cooler climate. The ideal sowing temperature is 10 - 25oC.

CORIANDER

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

MOROCCAN

Moroccan coriander features big sized seed and good heat tolerance. The plant is relatively shorter with relatively smaller dark green leaves. It performs well during Summer. It has strong aroma.

CORIANDER

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

SLOW BOLTING

Slow bolting coriander is bred by selection for its fresh green leaf colour and late boltingness. Due to its slow boltingness, it is suitable for planting all the year round. The petiole is fresh green. The leaves have strong aroma. Good uniformity.

CUCUMBER

GRACE F1

Grace F1 features straight fruit with outer skin of fresh green colour with dots. The fruits are cylindrical, 20 cm long and 4 cm wide. Vigorous growth, relatively early maturity. The fruits starts to be harvested 50 - 55 days from sowing in Spring and 40 - 45 days from sowing in Autumn. The flesh is about 1.5 cm thick. The average fruit weight is 230 - 250 gram. The main vine produces the fruits mainly with the first female flower appearing at the 7th to 11th node.

CUCUMBER

JOYFUL F1

Joyful F1 features straight fruit with outer skin of fresh green colour with black dots. The fruits are cylindrical, 20 cm long and 4 cm wide. Vigorous growth, relatively early maturity. The fruits starts to be harvested 50 - 55 days from sowing in Spring and 40 - 45 days from sowing in Autumn. The flesh is about 1.5 cm thick. The average fruit weight is 230 - 250 gram. The main vine produces the fruits mainly with the first female flower appearing at the 7th to 11th node.

CUCUMBER

CHAMPION F1

Champion F1 cucumber has vigorous growth. It has some resistance to powdery mildew. Early maturity. Good fruit setting. It has strong vine with light green leaves. Both main and lateral vines can produce fruits. The fruits are fresh green, 6 - 7 cm wide and 28 - 32 cm long. The average fruit weight is about 500 gram. High yield and consistent performance.

CUCUMBER

PRINCIPAL F1

Principal F1 cucumber has vigorous growth. It has some resistance to powdery mildew. Early maturity. Good fruit setting. It has strong vine with light green leaves. Both main and lateral vines can produce fruits. The fruits are big, fresh green, 8 cm wide and 25 - 32 cm long. The average fruit weight is about 800 gram. High yield and consistent performance.

CUCUMBER

CHOICE F1

Choice F1 cucumber is pathenocarpic, beet alpha type. The fruit is fresh green colour with smooth skin. The average fruit length is 16 - 18 cm. Good fruit setting. The fruits are tasty and have long shelf life.

EGGPLANT

VIOLET F1

Violet F1 is a hybrid eggplant with long purple red fruits. Medium maturity. The fruits are 30 cm long and 5 - 6 cm wide. The average fruit weight is 300 gram. The fruit colour is dark purple. It has rich flavour with good yield potential.

EGGPLANT

BLACKQUEEN F1

BlackQueen F1 is a hybrid eggplant with green calyx. Vigorous growth. The fruit is long cylindrical, 28 - 38 cm long and 7 cm wide. The fruit's skin is blackish purple with glossiness. The calyx is fresh green in colour. The fruit setting is strong. The fruit expands quickly. It allows the long continuous harvest.

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

THAI BASIL

Thai basil (*Ocimum basilicum* var. *thyrsoflora*) is distinguished by its deep purple stems, pointed green leaves and small purple-white flowers. It grows up to 45 cm tall. It thrives in warm sunny conditions. Compared to sweet basil, Thai Red Basil offers a more intense flavour with notes of anise and clove.

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

DILL

Dill is an aromatic annual herb valued for its feathery foliage and delicate flavour. It grows quickly from seed, producing soft, finely divided leaves in shades of blue-green that carry a fresh, slight sweet anise-like aroma. It thrives in full sun and well-drained soil. It performs best in cooler seasons. Upright plant habit.

ONION

RUBY RED F1

Ruby Red F1 onion has early maturity. Its skin is purplish-red coloured. It features globe shaped onion of 300 - 350 gram in average. It has nice flavour with good disease package.

ONION

GOLD YELLOW F1

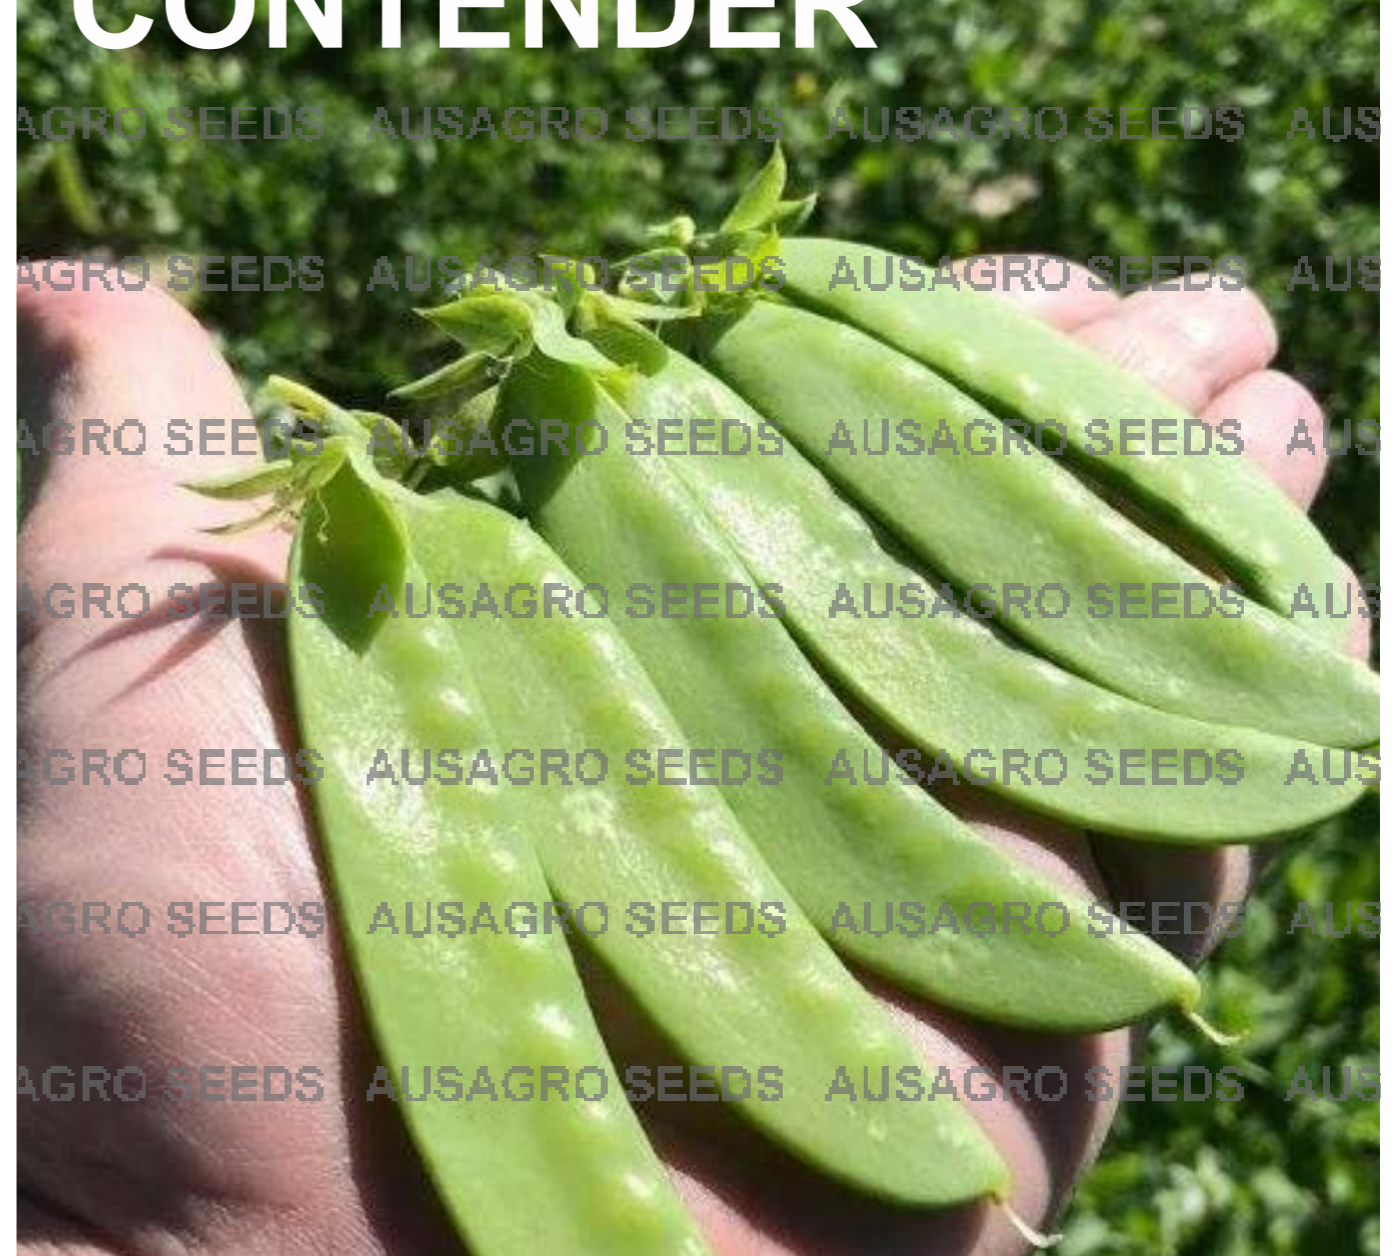

Gold Yellow F1 onion has early maturity. Gold Yellow F1 features globe shaped onion, with average weight of 300 - 350 gram. It has good disease package. It has nice flavour.

MAMMOLTH MELTING SUGAR PEA

Mammolth Melting is specially bred for harvesting sprout leaves. The variety is high yielding with many branching. It allows for extended window for harvesting sprout leaves. The sprout leaves are large with distinct shape and leaf veins. The eating quality is excellent particularly for stir fry.

CONTENDER

Contender is a snow pea variety with extra large pods. The pods are sweet, tender and crispy. The plants have white flowers with good pod setting. It has relatively late maturity with long harvest windows, allowing the growers to harvest the pods for an extended period of time.

SUGAR PEA

The plant is about 2 metres tall, with white flowers, single or double pods per node, round pods of 8 - 10 cm long and 1 cm thick, average pod weight of 8 grams. The pods are fresh green in colour. The pods are edible and crispy. Good Eating Quality. It is a climbing type.

HOT PEPPER**PRIME F1**

Prime F1 hot pepper is a hybrid line pepper variety. Its fruits are of 25 cm long and 2.5 cm wide. The average fruit weight is about 60 gram. Medium early. This cultivar has good growth and good fruit setting, allowing the continuous harvest.

SWEET PEPPER**ROYAL F1**

Royal F1 is a new hybrid sweet pepper. Its fruits are square blockly with dimension of 7 X 8 cm. The average fruit weight is about 120 - 180 gram. Its foliage has good coverage. The flesh is thick. It has vigorous growth.

SWEET PEPPER

SUPREME F1

Supreme F1 is a hybrid large sweet pepper. The fruits are 15 cm long and 7 cm wide. The fruits are long cone shaped. The young fruits are green while the mature fruits are red. The average fruit weight is 150 gram. The flesh is thick with small cavity. It has relatively good fruit setting. It is suitable for cultivation in open field and protected house.

SWEET PEPPER

CALIFORNIA WONDER

California wonder is a standard sweet pepper variety. It features smooth, blocky bell fruits, mostly 4-lobed, with thick walls. Fruits are green when young and red when mature. Foliage provides good cover for fruits.

HOT PEPPER

RED BEAUTY F1

Red Beauty F1 hot pepper is a well adapted Variety, Upright prolific fruit setting on vigorous, green - dark green fruits, 8-9 cm in length, Weight 5-6 gm. Harvest 80-90 day

HOT PEPPER

RED CHARM F1

Red Charm F1 hot pepper is a well adapted Variety, Upright prolific, green-light green fruits, 9-10 cm in length, Weight 6-7 gm. Harvest 90-110 day.

PUMPKIN

BLACKBABY F1

The outer skin is blackish green in colour. Strong fruit setting, The pumpkin is attractive with nice glossiness. The flesh is orange yellow in colour. Thick flesh, the flesh has nice powdery texture., good aroma. The flesh is 300 – 500 gram in average. The yield is high and stable. Good adaptability.

PUMPKIN

BLACKJACK F1

The outer skin is blackish green in colour. Strong fruit setting, The pumpkin is attractive with nice glossiness. The flesh is orange yellow in colour. Thick flesh, the flesh has nice powdery teture., good aroma. The flesh is 300 – 700 gram in average. The fruit is larger in size then Blackbaby F1.

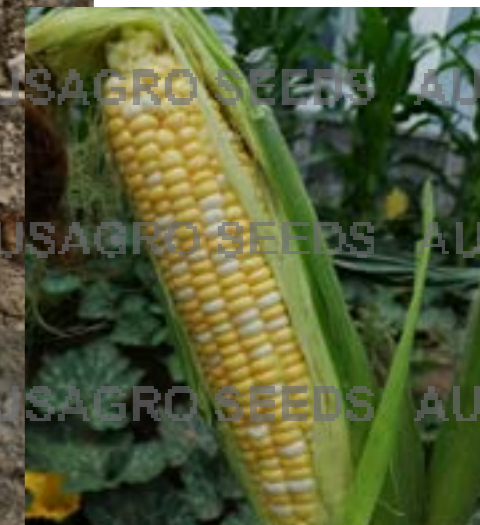

SWEET CORN

GOLDSWEET F1

GoldSweet F1 is a subtropical yellow supersweet corn. Good adaptability. It has nice attractive green husk with some flag leaves. The kernels are golden yellow in colour. Mainly 16 - 18 rows. Good disease package and wide adaptation.

SWEET CORN

GOLD & SILVER F1

Gold & Silver F1 is a new BICOLOR supersweet corn. It has nice green husk with flag leaves. The kernels are yellow and white with good colour contrast. Good tip fill. Mainly 16 rows. High eating quality. Wide adaptation to subtropics and temperate regions.

CHERRY TOMATO

FAIRY F1

Fairy F1 is a hybrid cherry tomato. Early-mid maturity. The fruits are oval. The average fruit weight is 20 gram. It features good fruit setting and anti-cracking fruits.

TOMATILLO

KEYSTONE F1

Keystone F1 is a new hybrid tomatillo variety. Its maturity is medium to late. It has good fruit setting. The fruits are flat round with many lobes. The average fruit weight is 350 gram. The fruit colour is glossy red. The flesh is fine textured with sweetness.

CHERRY TOMATO**BEAUTY F1**

Beauty F1 is a hybrid cherry tomato. Indeterminate type. Early maturity. The fruits are round. The average fruit weight is 16 gram. It features good fruit setting. High yield.

TOMATO**VICTORY F1**

Victory F1 is a hybrid indeterminate tomato. It has early maturity. The fruit is round shape with average fruit weight of 160 - 190 grams. The fruit setting is good. The fruit is anti-cracking.

WATERMELON

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

Supersweet
Blackbelle F1

Early to medium maturity. Oval fruit shape. Average Fruit weight of 4 - 5 KG. The skin is attractive dark green with black stripes. The flesh is red and crispy. Good for transportation.

WATERMELON

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

ASW 323 F1

Early to medium maturity. Tall globe fruit shape. Average Fruit weight of 10 KG. The skin is attractive light green with dark green stripes. The flesh is red and crispy. Good for transportation.

WATERMELON

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

SWEETBABY F1

SweetBaby F1 is a hybrid watermelon of Sugar Baby type. The average fruit weight is about 8 - 10 Kg. The fruit is round with black skin. The flesh is red and crispy. The maturity is about 75 days from sowing.

WATERMELON

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

BlackSum F1

BlackSum F1 is hybrid watermelon. The fruit is oblong, about 10 - 12 Kg. The skin is dark green. The flesh is red and crispy. Medium maturity. Vigorous growth.

WATERMELON

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

RED TREASURE F1

Red Treasure F1 is of Crimson Sweet type. The fruit is oval shape. The average fruit weight is 10 - 15 Kg. The skin is medium green with dark green wide stripes. The flesh is red with good level of brix. Good for transportation.

WATERMELON

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

ALL TREASURE F1

AllTreasure F1 is a hybrid watermelon of all sweet type. The fruit is long oval shape. The average fruit weight is about 10 Kg. The skin is medium green with dark green wide stripes. The flesh is red with a good level of brix. Good for transportation.

AMARANTH

RED AMARANTH

Red Amaranth has dark red leaves. The stems are red with greenish base. This variety is fast growing. It is tolerant to heat and humid. Good yield potential.

AMARANTH

TRICOLOR AMARANTH

Tricolor Amaranth features ovate to lance-shaped leaves with vivid coloration, often displaying a central splash of purple. It thrives in warm climates. The leaves are tender and rich in nutrients like iron, calcium and vitamins A and C. It belongs to the Amaranthaceae family and is known for its ornamental and edible qualities.

AMARANTH

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

GREEN POINTED

Green pointed leaf amaranth features elongated, pointed leaves with a smooth surface and a fresh glossy appearance. Its upright growth habit and uniform leaf shape make it an attractive and productive variety. It thrives in warm climates.

AMARANTH

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

GREEN ROUND

Green round leaf amaranth is prized for its broad, round and tender leaves. It thrives in warm climates and shows some tolerance to heat. The plant forms a lush canopy of smooth, vibrant green foliage, giving it an attractive appearance. Its rounded leaf shape distinguishes it from pointed-leaf types, offering a softer texture.

BITTER GOURD**BIG TOP**

Big Top Bitter Gourd has vigorous vines that produce large, heavily ridged fruits with a distinctive bulging top near the stem end. The main vine produces the first female flower at 8th to 14th node and then every 3 to 6 nodes. The fruit is 20 cm X 11cm. The skin is green. The flesh is 1.3 cm thick, less bitterness. Average fruit weight of 250 - 600 gram.

BITTER GOURD**LONG GREEN**

Long Green bitter melon has vigorous vine with deeply lobed leaves. The plant produces pale yellow flowers, with male and female blooms on the same vine. Fruits are long, cylindrical, and covered in warty ridges, turning to bright green as they mature. .

CHOI SUM

ROUND LEAF 45

Round leaf 45 days Choi Sum is a new selection with advantage of early maturity and oily green stems and leaves. The plant has thick stem and relatively small and round leaves. It has tolerance to both humid and heat. Vigorous growing.

CHOI SUM

ROUND LEAF 60

Round leaf 60 days Choi Sum is a mid-maturing variety of Chinese flowering cabbage characterized by its round leaves and a growth cycle of approximately 60 days from sowing to harvest. The flower stalks are typically thick, sweet, and crunchy with very little fibre.

80 DAY GREEN

“80-Day Youqing Choy Sum” is a late maturing variety known for its extended growth cycle, thick stalks, and excellent cold resistance. The stalks are glossy, oily green, and thick with firm flesh. They are highly resistant to becoming “hollow” inside.

TATSOI

TATSOI

The plant has a thick taproot with well developed fibrous roots. The stem is short and compact, and the plant grows in a prostrate or semi-prostrate rosette form. The leaves form a rosette, are oval to obovate, dark green in colour. The petioles are long and pale green. It is light-loving and prefers cool conditions, has strong cold tolerance and not hot resistant.

GARLAND CHRYSANTHEMUM

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

LARGE LEAF

Large leaf garland chrysanthemum is fast growing, cool-season leafy vegetable. It features wider, thicker leaves compared to small-leaf type, offering a more substantial bite and mild bitterness. The plant grows upright with deeply lobed foliage. It has unique flavour profile and texture.

GARLAND CHRYSANTHEMUM

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

SMALL LEAF

Small leaf garland chrysanthemum is cool-season leafy vegetable. Compared with the large leaf variety, it has thinner, more finely divided leaves and a stronger, slightly bitter taste. The plant grows upright with bushy foliage. It has unique flavour profile and texture.

WATER CONVULVULUS

BAMBOO LEAF

Bamboo leaf Kangkong is also known as water convolvulus. It features narrow, elongated leaves and hollow stems that grow vigorously in warm, moist conditions. Compared to broad leaf Kangkong, this cultivar has a more refined appearance and a slightly firmer bite.

WATER CONVULVULUS

BROAD LEAF

Broad leaf Kangkong features broad, heart-shaped leaves and thicker hollow stems compared to bamboo leaf kangkong. It grows well in warm and moist conditions. The harvest starts 25 - 35 days after sowing and full maturity is about 40 - 50 days. It can be harvested multiple times by cutting above the node. It grows well in high temperature and humidity.

LETTUCE

INDIAN LETTUCE

Indian Lettuce features a lettuce with green long pointed leaves with tender stems. The leaves and stems are crispy. It is a fast growing cool season leafy vegetable. Upright plant habit with compact rosette in early growth and later forms a taller elongated plant as the stem develops.

LETTUCE

LOOSE LEAF LETTUCE

Loose leaf lettuce is a crispy and tasty lettuce. This cultivar has good heat and cold tolerance, allowing it to be grown all the year round. The lettuce can be harvested around 50 days from sowing. The leaves are curly with distinct edges.

ANGLED LUFFA

LONG GREEN

Long Green angled luffa features a vigorous vine that produces bright yellow male and female flowers, with fruits that are cylindrical and deeply ridged, reaching 60 cm in length. It thrives in warm, humid climates and requires a long growing season. The fruit is edible and dark green and has a zucchini-like texture.

ANGLED LUFFA

MED-LONG GREEN

Med-long green luffa features a vigorous vine that produces bright yellow male and female flowers, with fruits that are cylindrical and deeply ridged, reaching 40 cm in length. It thrives in warm, humid climate and requires a long growing season. The fruit is edible and has a zucchini-like texture.

OPAL F1

Opal F1 sponge gourd is a hybrid sponge gourd. The main vine produces fruits at every 2 to 3 nodes. The fruits are 22 - 24 cm long and 7 - 8 cm wide. The average fruit weight is about 350 gram. The flesh is firm textured. The skin is medium green with wax. Good for transportation.

MALABAR SPINACH

GREEN MALABAR

Green malabar spinach is fast growing. It features soft-stemmed vines and thick oval semi-succulent leaves. The leaves and stems are green. It thrives in hot, humid conditions. The vine can reach several meters in length and produces small pink or white flowers.

MALABAR SPINACH

RED MALABAR

Red malabar spinach is fast growing. It features soft-stemmed vines and thick oval semi-succulent leaves. The leaves and green. The vines are red. It thrives in hot, humid conditions. The vine can reach several meters in length and produces small pink or white flowers.

PAK CHOI

TOMMIE F1 HOKDOU

Tommie F1 is hybrid hokdou type pak choi. It features dense, upright heads with smooth to slightly crinkled leaves. It is a cool season variety. It wraps well and maintains its signature barrel shape. The leaves are glossy dark green in colour. The plant is dwarf type.

PAK CHOI

JAMMIE F1 HOKDOU

Jammie F1 is hybrid hokdou type pak choi. It features dense, upright heads with smooth to slightly crinkled leaves. It is a cool season variety. It is slow to bolt, making it suitable for regions with fluctuating temperatures. Even under hot and dry condition, it wraps well and maintains its signature barrel shape. The leaves are glossy dark green in colour.

PAK CHOI

**GD NO.1
F1
MILKY**

GD No. 1 F1 is a new hybrid milky type pak choi. It features smooth, glossy white stems with tightly packed green leaves. It is bred for uniform growth, disease resistance and high yield. Its taste is mild and slightly sweet. This cultivar thrives in cool climate. The maturity is about 50 - 55 days.

PAK CHOI

AS 016 F1 GREEN

AS016 F1 Green pak choi features upright plant habit with fresh green and oval leaves. The petiole is mild green in color, wide and thick. This cultivar provides pak choi of good attractive barrel shape. The petiole is tightly packed.

RED CHIVES

Red Chinese Chives features deep red to purple, thick and tender stems with dark green foliage. The leaves emit a subtle garlicky aroma. The stem above ground is about 12 cm tall and upright. It thrives in a variety of soils and climates. Once established, it can be continuously harvested for a long period of time.

CHINESE KALE

GEM F1

GEM F1 is a hybrid Chinese Kale bred for thick stem and mushroom-shaped leaves and white flowers. It matures about 48 - 58 days after sowing. One special feature is its succulent stalks that remain tender even when mature. The variety is fast growing and well suited to temperate climate, thriving in cool season. The plant is about 35 cm tall.

CHINESE KALE

OPAL F1

OPAL F1 is a hybrid Chinese kale bred for more leaves. The plant style is semi-open. The leaf is near round, thick and slightly wrinkled. The plant height is about 28 - 32 cm tall. The node distance is relatively short. It is suitable for winter and spring cultivation with some tolerance to heat and bolting.

CHINESE RADISH

SHORT LEAF NO 13

Short Leaf No. 13 Radish features a compact foliage and uniform, cylindrical white radish. The short leaves make it suitable for dense planting, while the radish itself is tender, juicy and mild sweet with minimal pungency. It has relatively early maturity and performs well in cool to mild climates.

CHINESE RADISH

GREEN RADISH

Green skinned radish is an old traditional variety. It features green skin and white flesh. The flesh has relatively more fibre and less moisture. The radish flesh is tender with mild sweetness and nice aroma.

CHINESE RADISH

NAN BAN ZHOU

Nan Ban Zhou Chinese radish has late maturity. semi-upright plant style. plant height is 40 - 50 cm tall. The radish is cylindrical and 45 - 50 cm long. The flesh is white. The average fruit weight is about 1.2 - 2 Kg.

CHINESE MUSTARD

SUIDONG

Suidong Chinese Mustard is a leafy vegetable that features broad, slightly wrinkled green leaves with thick stems curling. It has a robust growth habit. It thrives in cooler seasons. Upright to semi-spreading plant habit. Compact rosette in early growth, gradually expanding as leaves enlarge. Key trait is thick juicy petiole and excellent crunchiness.

CHINESE MUSTARD

DAPINGBU

DAPINGBU Chinese Mustard is a heading Chinese mustard. It produces a big and semi-compact head, similar to cabbage but with thinner, crinkled leaves. The outer leaves are broad and slightly bitter, while the inner heart is tender and milder. The plant thrives in cool, moist conditions and is sensitive to both frost and heat. Its maturity is relatively early.

CHINESE MUSTARD

ZHUJIE BAMBOO

Zhujie Chinese Mustard is robust and fast growing leafy green. It features broad, crinkled leaves with a distinct flavour that intensifies as the plant matures. The plant typically grows 30 - 60 cm tall and produces edible stems and leaves that are rich in various nutrients.

SCALLION

FOUR SEASON

Four season scallion features slender green stalks and small white base. It grows quickly and can be harvested within 8 - 12 weeks of sowing. It is a non-bulbing perennial onion variety that thrives in temperate climates and is well suited to container or garden bed cultivation.

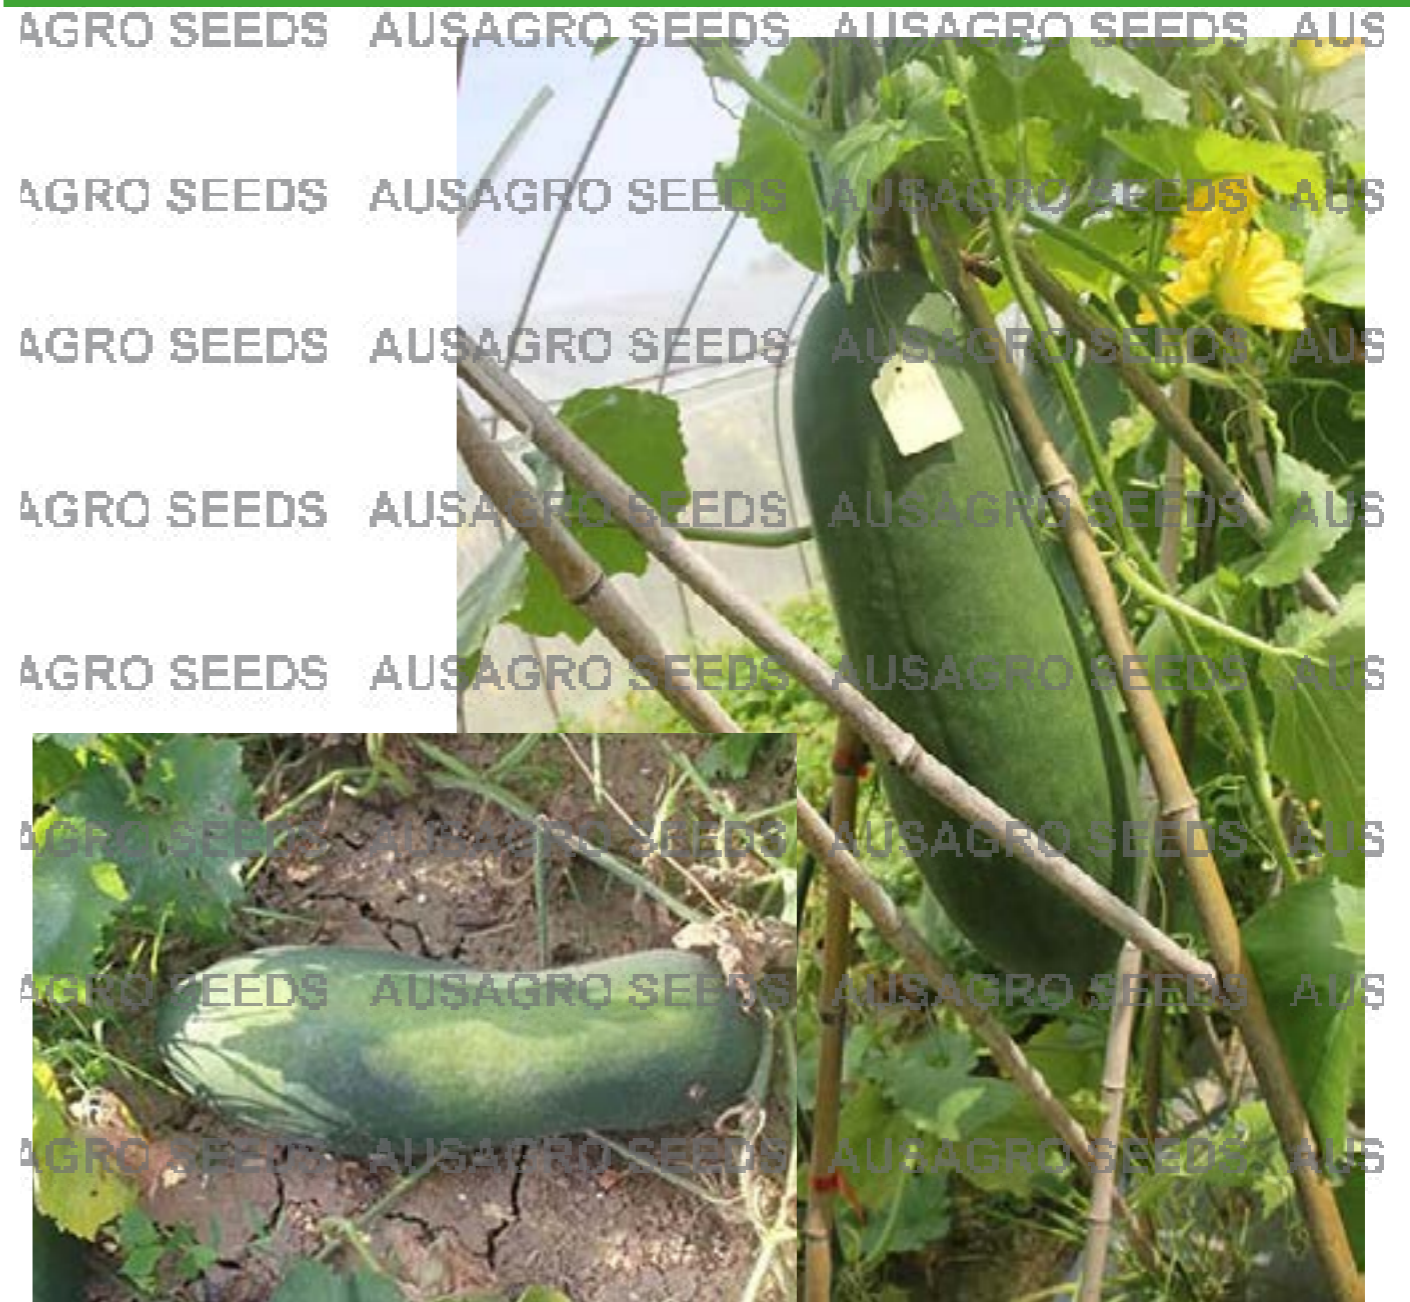

WINTER MELON

GREY GREEN

Grey green winter melon is short cylindrical shaped. The melon is about 40 cm long and 30 cm wide. The outer skin is green covered with white wax. The flesh is thick and white in colour. The average fruit weight is about 15 - 20 KG. This cultivar has wide adaptation and is tolerant to heat.

WINTER MELON

LONG BLACK

Long black winter melon is vigorous and resilient, with the first female flower typically appearing around the 18th node of the main vine. The fruits are cylindrical. The fruit is about 60 - 80 cm long and 25 - 30 cm wide. The flesh is white, thick and densely textured, offering a clean, subtle taste.

OSCAR F1

OSCAR F1 is a hybrid winter melon. It has medium to late maturity. The skin is dark green and turns to blackish green when mature. The flesh is fine textured. The young melon is 16 cm long and 8 - 9 cm wide. The old melon is 20 cm long and 14 cm wide. The young melon can be harvested with weight of 1.5 kg. The old melon is harvested at 4 - 5 kg.

CHINESE BEAN

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

YARD LONG BEAN

Yard long bean climbs on stakes and produces a lot of long dark green pods. The pods hang in single or double. The pods are edible and are crispy, tender and delicious. This cultivar thrives in warm and humid condition. The maturity is about 60 days from sowing.

CHINESE BEAN

AGRO SEEDS AUSAGRO SEEDS AUSAGRO SEEDS AUS

WHITE LONG BEAN

Compared to darker green varieties, white long beans are softer in texture and slightly sweeter in taste. The maturity is early, around 55 days in Spring sowing and 45 days in Summer sowing. The pods are pale green in colour. The pods are about 65 cm long. The pod weighs about 35 grams in average. The pods are slender and fleshy. Each pod contains edible cream-colored seeds.

Terms and Conditions

The information presented in this catalogue has been compiled by our company with the utmost care and according to the best knowledge available at the time of publication. All descriptions, data, and photographs are provided solely for general reference and informational purposes. While every effort has been made to ensure accuracy, variations may occur, and our company does not guarantee that all information is free from error. Photographs included in this catalogue are for illustrative reference only and may not precisely represent the final appearance or performance of the product.

The performance of any seed variety is influenced by numerous factors beyond the control of our company. These factors include, but are not limited to, climate conditions, soil characteristics, farming practices, crop management techniques, pest and disease pressure, and environmental variability. As such, the actual results achieved by growers may differ significantly from the information or expectations presented in this catalogue.

It is strongly recommended that growers, distributors, and seed traders conduct their own independent trials under local conditions before making commercial planting decisions. Trial results obtained by the user should be considered the primary reference for evaluating the suitability and performance of any seed variety. Our company encourages all customers to rely on their own observations and assessments when selecting products for commercial use.

Our company shall not, under any circumstances, be held responsible or liable for any economic loss, reduction in yield, loss of profit, or additional expenses arising from the use of the information provided in this catalogue. This includes, but is not limited to, costs associated with labour, fertilizers, pesticides, irrigation, land preparation, or any other input or operational expense. Any discrepancies between expected and actual plantation results shall not constitute grounds for compensation, reimbursement, or claims of any kind.

Warranty

Our company warrants that the seeds supplied conform to the label description within recognized tolerances and are of merchantable quality at the time of sale. This warranty is limited strictly to the replacement of

seeds or a refund of the purchase price, at the discretion of our company. No other warranties, whether expressed or implied—including warranties of fitness for a particular purpose—are provided.

Under no circumstances shall our company be liable for consequential, incidental, or indirect damages, including but not limited to economic losses, crop failures, or expenses arising from the use, handling, storage, or planting of the seeds. The buyer assumes all risks associated with seed performance, environmental conditions, and agricultural practices.

By purchasing and using the seeds described in this catalogue, the buyer acknowledges and accepts these Terms and Conditions in full.
